Phlebotomy Simplified

Conducting Online Research on Amazon Mechanical Turk® and Beyond, written by Leib Litman and Jonathan Robinson, provides both students and experienced researchers with essential information about the online platforms most often used for social science research. This insightful and accessible text answers common questions like, “How do I maintain data quality in online studies?,” “What is the best way to recruit hard-to-reach samples?” and “How can researchers navigate the ethical issues that are unique to online research?” Drawing on their experiences as the founders of CloudResearch (formerly TurkPrime), the authors provide information that guides new users planning their first online studies and engages even the most experienced researchers with detailed discussions about the challenges of online research. The book begins with an overview of Amazon’s Mechanical Turk and its rapid rise within academic research. Then, the authors describe how to set up an MTurk study with screenshots that walk readers through the steps of creating an account, designing a study, collecting data, and using third-

party applications to enhance MTurk's functionality. Later chapters provide readers with a detailed understanding of the MTurk environment and use data from hundreds of thousands of participants and tens of millions of completed tasks to dive into issues like participant demographics, sources of sampling bias, and the generalizability of findings from MTurk. Finally, the book explores the benefits of using other online platforms as a complement to MTurk and the ethical issues that are unique to conducting research with online participant platforms. Throughout the book, the authors share hands-on advice and best practices, such as those for conducting longitudinal studies or carrying out complex studies. Altogether the mix of data, insight, and advice make this book an essential resource for researchers who want to understand the online environment and the most effective ways to conduct research online.

Biomaterials Science

This innovative textbook and CD-ROM package provides the most interactive case-based learning tool for clinical lab science. Cases are presented in a simulated laboratory setting allowing students to hone their clinical reasoning skills as

outlined in the new curriculum guidelines, Body of Knowledge, published by the American Society of Clinical Laboratory Science. Each clinical sample includes patient demographic information establishing the case. Students are then asked to perform or interpret laboratory test results or retrieve additional test results to resolve the case – exactly as they would in the clinical laboratory.

Immunohematology for Medical Laboratory Technicians

This unique collection of 55 multidisciplinary case studies is designed to help laboratory technologists and technicians "experience" how departments work together to help the physician make a diagnosis and determine the best course of treatment for the patient. In working through the comprehensive, real-world scenarios, readers deal firsthand with interpreting data from two, three or four disciplines (Blood Bank, Chemistry, Hematology, Immunology, Microbiology, Urinalysis), integrating the facts (laboratory data) from different departments and thinking critically about what they mean. Includes 55 cases--11 Blood Bank cases; 12 Chemistry cases; 10 Hematology/Coagulation cases; 5 Immunology/Serology cases; 10 Microbiology cases; 7 Urinalysis cases. Technicians and technologists who have been out of the field for awhile and are in the process of reentry into the profession and technicians and technologists who are looking for a general review of clinical laboratory science.

Self-assessment Q&A in Clinical Laboratory Science, III

It is often said that the “dosage” of any substance determines its remedy or poison effect. Heavy metal sources encompass sewage, pesticides, fertilizers, environmental contamination, occupational exposure/contact through inhalation, ingestion, and skin. Before the advent of technology/the industrial revolution, communicable diseases ravaged the human race but this seems to have given way to non-communicable diseases such as cancers, renal failure, hormonal distortion enzymes, inhibition of fetal growth, and DNA damage causing negative health issues due to heavy metals. This book brings to the fore probably the most recent experimental research/review on heavy metal contamination, remediating techniques, cellular tissue damage, and toxicological and antioxidant effects of heavy metals. It is hoped that its contents will make interesting reading for all.

Medical Laboratory Science : Theory And Practice

Health information technologies are revolutionizing and streamlining healthcare, and uptake continues to rise dramatically. If these technologies are to be effectively implemented, capacity must be built at a regional, national and global level, and the support and involvement of both government and industry will be vital. This book presents the proceedings of the 2017 Information Technology and Communications in Health conference (ITCH 2017), held in Victoria, BC, Canada, in February 2017. The conference considers, from a variety of perspectives, what is required to move the technology forward to real, sustained and widespread use, and the solutions examined range from improvements in usability and training to the need for new and improved design of information systems, user interfaces and interoperable solutions. Government policies, mandates, initiatives and the need for regulation are also explored, as is the requirement for improved interaction between industrial, governmental and academic partners. With its focus on building the next generation of health informatics and the capacity required to deliver better healthcare worldwide, this book will be of interest to all those involved in the provision of healthcare.
