The author gives a critical and comprehensive study of the fundamental problem of universals in Indian Philosophy. The centre of the study is the controversy between the Nyaya-Vaisesika and the Mimamsa realists on the one hand and the Buddhist nominalists on the other. The author discusses not only the epistemological and metaphysical approach to the problem of universals but also the semantic approach made by the various systems of Indian Philosophy. In this context the view of the Grammarions with special reference to Bhartrhari has been discussed in some detail. A brief but critical analysis of some of the main trends of thought on universals in Western Philosophy--beginning from Plato to the contemporary philosophers--has also been given. Besides his scholarly and eminently readable treatment of fundamental problem of universals, the author has attempted to give his own solution of the problem. It is based on the recurrent identities and similarities which are the principles of grouping and which form the foundation of our thought and speech.

The Problem of Universals in Indian Philosophy

Takes a detailed look at the spirituality of people beyond the fringe of the church and offers insightful responses to how the church might address the issue of evangelism in the 21st century.

The Method of the Vedanta

Metamaterials have provided applications in spectral ranges covering radio frequencies and ultraviolet. However, most applications have been extrapolated to the visible or near-infrared after being developed at the GHz level. This is due to technological reasons since fabrication of microwave antennas is not as demanding as THz resonators or plasmonic nanostructures. Accordingly, this book has been divided into three parts. In the first part, fundamentals of metamaterials and metadevices are discussed, while describing recent advances in the field. In the second part, the discussion is extended to the different spectral ranges focusing on the strategies for enabling the reconfigurability of metadevices. Given the increasing interest in THz applications, these can be found in the third part.

As a system of realism, the Nyëya deserves special study to show that Idealism was not the only

philosophical creed of ancient India. This book is an attempt to give a complete account of the Nyëya theory of knowledge in comparison with the rival theories of other systems, Indian and Western, and critical estimation of its worth. Though theories of knowledge of the Vedënta and other schools have been partially studied in this way by some, there has as yet been no such systematic, critical and comparative treatment of the Nyëya epistemology, The importance of such a study of Indian realistic theories of knowledge can scarcely be overrated in this modern age of Realism.

Capitalist Nigger is an explosive and jarring indictment of the black race. The book asserts that the Negroid race, as naturally endowed as any other,

is culpably a non-productive race, a consumer race that depends on other communities for its culture, its language, its feeding and its clothing. Despite enormous natural resources, blacks are economic slaves because they lack the 'devil-may-care' attitude and the 'killer instinct' of the Caucasian, as well as the spider web mentality of the Asian. A Capitalist Nigger must embody ruthlessness in pursuit of excellence in his drive towards achieving the goal of becoming an economic warrior. In putting forward the idea of the Capitalist Nigger, Chika Onyeani charts a road to success whereby black economic warriors employ the 'Spider Web Doctrine' - discipline, self-reliance, ruthlessness - to escape from their victim mentality. Born in Nigeria, Chika Onyeani is a journalist, editor and former diplomat.

Ref: CosmoMr. Dutt's work is a compendium where all information connected with the progress of Buddha's work is available in a well-ordered form. Such a work, the details of which have been laboriously collected from the Buddhist scriptures and arranged in such a way as to enable one to see the large masses of details about Buddha's career in their logical and chronological relations, has certainly a great value not only for scholars but for ordinary readers interested in the history of the spread of Buddhism. This generally is the matter that forms the first part of this treatise. The second part constitutes of the details delineating the four principal schools of Buddhism including resumes of their doctrines. The portions of the

sketches bearing on the origin, development, and activities of the schools have been drawn by Mr. Dutt for the first time from the existing material. The book remains a major contribution to the proper study and understanding of the Buddhist religion.

Engineers in multiple disciplines—environmental, chemical, civil, and mechanical—contribute to our understanding of air pollution control. To that end, Noel de Nevers has incorporated these multiple perspectives into an engaging and accessible overview of the subject. While based on the fundamentals of chemical engineering, the book is accessible to any reader with only one year of college chemistry. In addition to detailed discussions of individual air pollutants and the theory and practice of air pollution control devices, de Nevers devotes seven chapters to topics that influence device selection and design, such as atmospheric models and U.S. air

pollution law. The Third Edition's many in-text examples and end-of-chapter problems provide a more complex treatment of the concepts presented. Significant updates include more discussion on the problem of greenhouse gas emissions and a thorough look at the Volkswagen diesel-emission scandal.
