The last decade has seen a revolution in global energy. First, we saw explosive growth in demand from Asia's rising powers, which fueled fears about scarcity and conflict. But we've also seen an American revolution in technology and markets, resulting in a dramatic increase in supply. This is strengthening America's hand in the world—but it's not without complications. There are major security consequences of these shifts. Among the most consequential are China and India, Asia's emerging giants, which are increasingly exposed to political risks associated with energy risks, as well as the energy flows, pivoting to Asia. Meanwhile the great powers struggle to balance their need for fossil fuels with a mounting effort to tackle climate change. The top powers, and the United States above all, face a strategic choice: whether to use energy as a weapon of geopolitics, or as a tool of a stable order.

In the spring of 1942 Britain's far-flung empire was in the greatest peril. North Africa was being overrun by the German Afrika Korps and in south-east Asia the forces of Imperial Japan had captured Singapore and were threatening India. Only the most urgent reinforcement of both war fronts could prevent disaster. But Britain's shipping routes to Egypt and India passed the island of Madagascar. If the Japanese Navy, operating out of Madagascar, could sever Britain's communications with Cairo and Delhi, then the whole of North Africa and the Indian sub-continent would be at the mercy of the Axis Powers. In a desperate race against time, and under conditions of the utmost secrecy, at Churchill's instigation Britain planned to seize Madagascar, the fourth largest island in the world, before the Japanese could strike. An overwhelming force was assembled and despatched as part of the largest convoy ever to have left Britain's shores. Yet the expedition's commanders were faced with not just military but also political obstacles, because the forces occupying the island were not those her enemy's but those of her former ally - France. The Secret Invasion is the first book to examine in detail this crucial campaign which was Britain's largest amphibious assault since the First World War and the first large-scale combined air, sea and land operation Britain had attempted.

The relationship between Canada and France has always been complicated by the Canadian federal government's relations with Quebec. In this first study of Franco-Canadian relations during the Second World War, Olivier Courteaux demonstrates how Canada's wartime foreign policy was shaped by the country's internal divides. As Courteaux shows, Quebec's vocal nationalist minority came to openly support France's fascist Vichy regime and resented Canada's involvement in a 'British' war, while English Canada was largely sympathetic to de Gaulle's Free French movement and accepted its duty to aid embattled Mother Britain. Meanwhile, on the world stage, Canada deftly juggled ties with both French factions to appease Great Britain and the United States before eventually giving full support to the Free French movement. Courteaux concludes this extensively detailed study by illustrating Canada's vital role in helping France reassert its position on the global stage after 1944. Filled with international intrigue and larger-than-life characters, Canada between Vichy and Free France adds greatly to our comprehension of Canada's foreign relations and political history.

This book is comprised of 7 chapters covering the geographical distribution and control of ticks and tickborne diseases in the Euro-Asia region. Chapter 1 focuses on the factors behind the emergence and reemergence of tickborne diseases, highlighting the theme of environmental and climatic change and also the renewed interest in ticks and the diseases they transmit, which has been stimulated by an increased awareness of tickborne zoonoses. Chapter 2 describes the basic biology of a total of 25 important tick species endemic to part or all of the geographical region under consideration, and also includes short accounts of their life cycles, geographical distributions and significance as vectors. The factors responsible for the spread and distribution of ticks are considered in chapter 3, which include climate, land use, animal movement (both wild and domestic) and importation of exotic vertebrates. Tickborne infections are reviewed in chapter 4. The geographical distribution of tickborne pathogens is the focus of Chapter 5, in the form of maps with accompanying qualifying and illustrative comments. Chapter 6 addresses the distributions of the vector ticks. Chapter 7 addresses the surveillance and control of ticks and tickborne diseases. It includes a brief description of tick sampling methods, an introduction to the principles of surveillance and monitoring and control options for both ixodids and argasids.

In Empire's Crossroads, Carrie Gibson offers readers a vivid, authoritative and action-packed history of the Caribbean. For Gibson, everything was created in the West Indies: the Europe of today, its financial foundations built with sugar money: the factories and mills built as a result of the work of slaves thousands of miles away; the idea of true equality as espoused in Saint Domingue in the 1790s; the slow progress to independence; and even globalization and migration, with the ships passing to and fro taking people and goods in all possible directions, hundreds of years before the term 'globalization' was coined. From Cuba to Haiti, from Dominica to Martinique, from Jamaica to Trinidad, the story of the Caribbean is not simply the story of slaves and masters - but of fortune-seekers and pirates, scientists and servants, travellers and tourists. It is not only a story of imperial expansion - European and American - but of global connections, and also of life as it is lived in the islands, both in the past and today.

In 'NEED A CAB?!, The Wild Times and Misadventures of a Newbie Cab Driver, ' join Monrovia Wuss (Money, for short), a newcomer to the profession, as he whisks and wafts you along the cab-driving journey of one escapade after another, mostly hilarious but a few precarious moments. The character-driven, quick-paced story involves colorful characters and odd, outlandish situations. At Regal Taxi, Money is tricked by cowboys into riding a wild bronco, transports a cheerleader squad not shy in revealing skin, and escorts an almost-deaf elderly lady with a voice whinier than a two ton rusty door hinge. During his employment with Yellow Taxi, he delivers a plastered air traffic controller to the airport, making him vow he'll never fly again, while on another run he questions his sanity after experiencing the effects of a ventriloquist. American Taxi offers little relief from the abnormal or weird, only this time the deviance isn't pertinent to passengers: a dispatcher calls him 'Toots' and a fellow driver has a manic reaction of clapping once, bending over and bark-laughing over anything the least bit funny. Money eventually forms his own Wild Hare Taxi--one cab, one driver--and survives even zanier characters and events: preventing his cab from being towed by a transplanted Mainer, navigating German-speaking tennis players to their destination and battling trouble-making fellow

cabdrivers. Money moves to Alaska intent on driving cab in the winter and building his own wilderness cabin in the summer, wondering whether he can withstand the call of the wild over the demands of making a living in crazier circumstances. Sprinkled and layered throughout are social commentaries concerning designers and their designs, common sense and pragmatism, the fact that we all have our own demons, devils and peccadilloes, and the plain simple truth that things just aren't always as they seem. This publication is the third biennial report coordinated by the United Nations Office for Disaster Risk Reduction (UNISDR). The first and second reports focused primarily on public policy and the role of national and local governments in disaster risk reduction. This current report explores why increasing disaster risks represent a growing problem for the economic and business community at different scales. It examines how paradoxically business investments that aimed to strengthen competitiveness and productivity may have inadvertently contributed to increasing risks. This report seeks to engage businesses in a dialogue on disaster risk management that goes beyond the current emphasis on response and preparedness and instead identifies opportunities for the creation of shared value for business and society.

Intelligence was a central element of the Cold War and the need for it was expected to diminish after the USSR's collapse, yet in recent years it has been in greater demand than ever. The atrocities of 11 September and the subsequent "war on terrorism" now call for an even more intensive effort. Important questions arise on how intelligence fits into the world of increased threats, globalization and expanded international action. This volume contains the recent work on this subject by Michael Herman, British intelligence professional for 35 years and Oxford University academic. It compares intelligence with other government information services, and discusses the British intelligence system and the case for its reform. It also addresses the ethical issues raised by intelligence's methods and results: "do they on balance make for a better world or a worse one?". Other chapters explore a wide range of intelligence topics past and present, including the transatlantic relationship, the alliance strategies of Norway and New Zealand, Mrs Thatcher's "de-unionization" of British Sigint, and personal memories of the British Cabinet Office in the 1970s. Michael Herman argues for intelligence professionalism as a contribution to international security and for its encouragement as a world standard. The modern challenge is for intelligence to support international cooperation in ways originally developed to advance national interests, while at the same time developing some

restraint and international "rules of the game", in the use of intrusive and covert methods on its traditional targets. The effects of 11 September on this challenge are discussed in a thoughtful afterword.

The substantial burden of death and disability that results from interpersonal violence, road traffic injuries, unintentional injuries, occupational health risks, air pollution, climate change, and inadequate water and sanitation falls disproportionately on low- and middle-income countries. Injury Prevention and Environmental Health addresses the risk factors and presents updated data on the burden, as well as economic analyses of platforms and packages for delivering cost-effective and feasible interventions in these settings. The volume's contributors demonstrate that implementation of a range of prevention strategies-presented in an essential package of interventions and policies-could achieve a convergence in death and disability rates that would avert more than 7.5 million deaths a year.

Ticks and Tick-borne Diseases

How should history judge the life and career of Erwin Rommel, the most famous German general of the Second World War, seventy years after his death on 14 October 1944? In his own time and in the years immediately after the war his reputation as a great and chivalrous commander grew to the point where it took on almost legendary proportions, and the legend is still with us today. His apparent support for the plot

to remove Hitler from power in 1944 and the manner of his death, committing suicide in order to protect his family from Nazi retribution, further enhanced his image as an honourable, professional soldier. But does he deserve this legendary status? Can his exploits as a soldier and commander and his conduct of the war be separated from the aggressive aims of Hitler and the Nazis whom he and the German army served? These are among the key questions Ian Beckett and his team of expert contributors seek to answer in this stimulating and timely study of Rommel and his legacy. They look critically at every stage of Rommel's brilliant career, from the early fame he achieved as a daring young officer fighting on the Italian front in the First World War, through his exploits as a panzer leader during the German invasion of France in 1940, and his generalship in the Western Desert when he commanded the German and Italian forces fighting the British. These achievements and the publicity that went with them gave him an extraordinary, perhaps overinflated reputation within Germany and among the opposing Allies. As featured in Cornwall Today.

This book argues convincingly that a significant victory was won by the Australians and New Zealanders on the first day of the Gallipoli Campaign. Its subject is not the Anzac Cove landings but the battle - later that day - between the Australian and

New Zealand Army Corps and III Ottoman Corps. That battle, rather than the landing, should be the focus of our attention when we remember 25 April 1915. Many of our cherished myths are challenged. In their place is a host of new insights about the Gallipoli plan, the intelligence gathered beforehand, the quality of the troops, the importance of the Ottoman artillery and the casualties suffered on both sides.

The world is currently experiencing unprecedented global change, with population increase, urbanisation, climate change and environmental degradation combining to make management of freshwater resources a critical policy focus of the twenty-first century. This timely book designs and develops an original, analytical framework for water law reform processes, using case studies across four jurisdictions. Addressing the four principal areas of water law - integrated water resource management (IWRM) and river basin planning, water rights and allocation, water pollution and quality, and water services - this book provides a comprehensive study of water law, within the context of global and regional policy agendas. Case studies from England, Scotland, South Africa and Queensland, Australia, are presented, providing comparators from both common law and

mixed jurisdictions, from the northern and southern hemispheres, and from developed and developing countries. A legislative framework is proposed for water law reform processes, and the consequences of different reform options are considered and investigated. A valuable resource for academics and graduate students in environmental law, resource management, hydrology and social science, this book is also highly relevant to policymakers, NGOs and legal practitioners.

Victor Peters is back with another spell bound story set in the exotic backgrounds of China and the Middle East. Once again Peters plays in the playground of the ultra rich and powerful people of various continents where people of all races, creed and social level fight for ultimate power. This is a story of an International global power game and revenge, of economic maneuvers in order to gain that little edge over the competition and of political bickering and infighting that more often than not leads to cataclysmic events. The author has a unique gift of capturing the twists and ironies of fate. His insights into the ambitions and passions of his characters are brilliant. The girls are gorgeous and ready to protect Peters, some for love and others for selfish motives.
