Because nearly all aspects of culture depend on the movement of bodies, objects, and ideas, mobility has been a primary topic during the past forty years of archaeological research on small-scale societies. Most studies have concentrated either on local moves related to subsistence within geographically bounded communities or on migrations between regions resulting from pan-regional social and environmental changes. Gregson Schachner, however, contends that a critical aspect of mobility is the transfer of people, goods, and information within regions. This type of movement, which geographers term "population circulation," is vitally important in defining how both regional social systems and local communities are constituted, maintained, and—most important—changed. Schachner analyzes a population shift in the Zuni region of west-central New Mexico during the thirteenth century AD that led to the inception of major demographic changes, the founding of numerous settlements in frontier zones, and the initiation of radical transformations of community organization. Schachner argues that intraregional population circulation played a vital role in shaping social transformation in the region and that many notable changes during this period arose directly out of peoples' attempts to create new social mechanisms for coping with frequent and geographically extensive residential mobility. By examining multiple aspects of population circulation and comparing areas that were newly settled in the thirteenth century to some that had been continuously occupied for hundreds of years, Schachner illustrates the role of population circulation in the formation of social groups and the creation of contexts conducive to social change.

The Bookseller

Incorporating fundamental principles as well as up-to-date applications in soil formation, this work emphasizes the equal importance of organic and inorganic soil constituents by delineating the role of complex carbohydrates, amino acids, proteins, lipids, nucleic acids, lignins, enzymes, and humic acids in soil reactions. This edition features coverage of the relation of pe-pH with the biochemical cycle, soil air quality and soil humidity, thermodynamics in cation exchange and its

connection with the quantity/intensity ratio, and more.

Vols. 13-62 include abridged annual reports and proceedings of the annual meetings of the American Missionary Association, 1869-1908; v. 38-62 include abridged annual reports of the Society's Executive committee, 1883/84-1907/1908.

Maternal-Newborn Nursing

In the prehistoric Copper Age, long before cities, writing, or the invention of the wheel, Old Europe was among the most culturally rich regions in the world. Its inhabitants lived in prosperous agricultural towns. The ubiquitous goddess figurines found in their houses and shrines have triggered intense debates about women's roles. The Lost World of Old Europe is the accompanying catalog for an exhibition at New York University's Institute for the Study of the Ancient World. This superb volume features essays by leading archaeologists as well as breathtaking color photographs cataloguing the objects, some illustrated here for the first time. The heart of Old Europe was in the lower Danube valley, in contemporary Bulgaria and Romania. Old European coppersmiths were the most advanced metal artisans in the world. Their intense interest in acquiring copper, Aegean shells, and other rare valuables gave rise to far-reaching trading networks. In their graves, the bodies of Old European chieftains were adorned with pounds of gold and copper ornaments. Their funerals were without parallel in the Near East or Egypt. The exhibition represents the first time these rare objects have appeared in the United States. An unparalleled introduction to Old Europe's cultural, technological, and artistic legacy, The Lost World of Old Europe includes essays by Douglass Bailey, John Chapman, Cornelia-Magda Lazarovici, Ioan Opris and Catalin Bem, Ernst Pernicka, Dragomir Nicolae Popovici, Michel S  f  riad  s, and Vladimir Slavchev.

Principles of Soil Chemistry, Third Edition,

Perfect bound edition of this superb collection of over 200 recipes using real maple syrup. It has been compiled, tested and presented by the owner of one of the finest maple syrup sugar houses in southern Maine. Because a cookbook is only as good as its index, this volume has been extensively indexed. There is a section on how maple syrup is made, how it is graded, what the consumer should know when buying real maple syrup and caring for it after getting it home. Simple instructions for substituting maple syrup in your own favorite recipes is also included.

In January 1982, archaeologists conducting a pre-construction excavation at 175 Water Street in Lower Manhattan found the remains of an eighteenth-century ship. Uncertain of what they had found or what its value might be, they called in two nautical archaeologists—Warren Riess and Sheli Smith—to direct the excavation and analysis of the ship's remains. As it turned out, the mystery ship's age and type meant that its careful study would help answer some important questions about the commerce and transportation of an earlier era of American history. The Ship that Held Up Wall Street tells the

whole story of the discovery, excavation, and study of what came to be called the “Ronson ship site,” named for the site’s developer, Howard Ronson. Entombed for more than two hundred years, the Princess Carolina proved to be the first major discovery of a colonial merchant ship. Years of arduous analytical work have led to critical breakthroughs revealing how the ship was designed and constructed, its probable identity as a vessel built in Charleston, South Carolina, its history as a merchant ship, and why and how it came to be buried in Manhattan.
