How America's prisons turned a "brutal and inhumane" practice into standard procedure Originally meant to be brief and exceptional, solitary confinement in U.S. prisons has become long-term and common. Prisoners spend twenty-three hours a day in featureless cells, with no visitors or human contact for years on end, and they are held entirely at administrators' discretion. Keramet Reiter tells the history of one "supermax," California's Pelican Bay State Prison, whose extreme conditions recently sparked a statewide hunger strike by 30,000 prisoners. This book describes how Pelican Bay was created without legislative oversight, in

fearful response to 1970s radicals; how easily prisoners slip into solitary; and the mental havoc and social costs of years and decades in isolation. The product of fifteen years of research in and about prisons, this book provides essential background to a subject now drawing national attention.

Surface-Enhanced Raman Spectroscopy: Principles, Experiments, and Applications is a comprehensive, up to date, and balanced treatment of the theoretical and practical aspects of Surface-Enhanced Raman Scattering (SERS), a useful branch of spectroscopy for several areas of science. This book describes the basic principles of SERS, including SERS mechanisms, performing SERS measurements, and interpreting data. Also emphasized are applications in electrochemistry; catalysis; surface processing and corrosion; Self-Assemble-Layer and L-B Films; polymer science; biology; medicine and drug analysis; sensors; fuel cells; forensics; and archaeology. It is an essential guide for student and professional analytical chemists.

Handbook of Advanced Chromatography /Mass Spectrometry Techniques is a compendium of new and advanced analytical techniques that have been developed in recent years for analysis of all types of molecules in a variety of complex matrices, from foods to fuel to pharmaceuticals and more. Focusing on areas that are becoming widely used or growing rapidly, this is a comprehensive volume that describes both theoretical and practical aspects of advanced methods for analysis. Written by authors who have published the foundational works in the field, the chapters have an emphasis on lipids, but reach a broader audience by including advanced analytical techniques applied to a variety of fields. Handbook of Advanced Chromatography / Mass Spectrometry Techniques is the ideal reference for those just entering the analytical fields covered, but also for those experienced analysts who want a combination of an overview of the techniques plus specific and pragmatic details not often covered in journal reports. The authors provide, in one source, a synthesis of knowledge that is scattered across a multitude of literature articles. The combination of pragmatic hints and tips with theoretical concepts and demonstrated applications provides both breadth and depth to produce a valuable and enduring reference manual. It is well suited for advanced analytical instrumentation students as well as for analysts seeking

additional knowledge or a deeper understanding of familiar techniques. Includes UHPLC, HILIC, nano-liquid chromatographic separations, two-dimensional LC-MS (LCxLC), multiple parallel MS, 2D-GC (GCxGC) methodologies for lipids analysis, and more Contains both practical and theoretical knowledge, providing core understanding for implementing modern chromatographic and mass spectrometric techniques Presents chapters on the most popular and fastest-growing new techniques being implemented in diverse areas of research

This SpringerBrief deals with the control and optimization problem in hybrid electric vehicles. Given that there are two (or more) energy sources (i.e., battery and fuel) in hybrid vehicles, it shows the reader how to implement an energy-management strategy that decides how much of the vehicle's power is provided by each source instant by instant. Hybrid Electric Vehicles: •introduces methods for modeling energy flow in hybrid electric vehicles; •presents a standard mathematical formulation of the optimal control problem; •discusses different optimization and control strategies for energy management, integrating the most recent research results; and •carries out an overall comparison of the different control strategies presented. Chapter by chapter, a case study is thoroughly developed, providing illustrative numerical examples that show the basic principles applied to real-world situations. The brief is intended as a straightforward tool for

learning quickly about state-of-the-art energy-management strategies. It is particularly well-suited to the needs of graduate students and engineers already familiar with the basics of hybrid vehicles but who wish to learn more about their control strategies.

Progettazione e calcolo di elementi e connessioni in acciaio

This is the second volume of the comprehensive, two-volume work on oxidative stress in lung diseases. Adopting a multidisciplinary approach, it demonstrates the cellular and molecular mechanisms associated with ROS (reactive oxygen species)-induced initiation and progression of a variety of lung diseases, such as COPD, emphysema, asthma, cystic fibrosis, occupational pulmonary diseases and pulmonary hypertension and discusses points for therapeutic intervention. The book also covers translational research and the latest research on prevention and therapeutics. Each chapter includes in-depth insights into the mechanisms associated with lung diseases and into identifying targets for drug development. Bridging the gap between fundamental and translational research, and examining applications in the biomedical and pharmaceutical industry, it is a thought-provoking read for basic and applied scientists engaged in biomedical research.

Implement machine learning and deep learning methodologies to build smart, cognitive AI projects using Python Key Features A go-to guide to help you master AI algorithms and concepts 8 real-world projects tackling different challenges in healthcare, e-commerce, and surveillance Use TensorFlow, Keras, and other Python libraries to implement smart AI applications Book Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learn Build an intelligent machine

translation system using seq-2-seq neural translation machines Create AI applications using GAN and deploy smart mobile apps using TensorFlow Translate videos into text using CNN and RNN Implement smart AI Chatbots, and integrate and extend them in several domains Create smart reinforcement, learning-based applications using Q-Learning Break and generate CAPTCHA using Deep Learning and Adversarial Learning Who this book is for This book is intended for data scientists, machine learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book

Click chemistry describes organic reactions which are highly efficient, regioselective and allow for mild reaction conditions. The archetypal click reaction of Cu(I)-catalyzed azide-alkyne cycloaddition (CuAAC) is used in many diverse areas and has been extensively developed for polymer synthesis, leading to the term of click polymerization. This technique enables the preparation of functional polymers with linear and topological structures that have the potential to be used in optoelectronics and biological fields. Edited by world renowned experts, Click

Polymerization is the first book to comprehensively summarize this approach to polymer synthesis consolidating all the different reaction types in one resource. From the basic knowledge through to the latest developments in synthesis, chapters include transition-metal catalysed and metal-free azide-alkyne click polymerizations as well as thiol-ene, thiol-yne and thiol-epoxy click polymerizations. The book provides an authoritative guide to click polymerization techniques for graduate students and researchers interested in polymer chemistry and materials science.

Most syntheses in the chemical research laboratory fail and usually require several attempts before proceeding satisfactorily. Failed syntheses are not only discouraging and frustrating, but also cost a lot of time and money. Many failures may, however, be avoided by understanding the structure-reactivity relationship of organic compounds. This textbook highlights the competing processes and

limitations of the most important reactions used in organic synthesis. By allowing chemists to quickly recognize potential problems this book will help to improve their efficiency and success-rate. A must for every graduate student but also for every chemist in industry and academia. Contents: 1 Organic Synthesis: General Remarks 2 Stereoelectronic Effects and Reactivity 3 The Stability of Organic Compounds 4 Aliphatic Nucleophilic Substitutions: Problematic Electrophiles 5 The Alkylation of Carbanions 6 The Alkylation of Heteroatoms 7 The Acylation of Heteroatoms 8 Palladium-Catalyzed C-C Bond Formation 9 Cyclizations 10 Monofunctionalization of Symmetric Difunctional Substrates

The Passing-on of Knowledge

This book gathers original research papers presented at the 4th International Conference on Computational Mathematics and Engineering Sciences, held at Akdeniz University, Antalya, Turkey, on 20-22 April 2019. Focusing on computational methods in science, mathematical tools applied to engineering, mathematical modeling and new aspects of analysis, the book discusses the applications of mathematical modelling in areas such as health science, engineering, computer science, social science, and economics. It also describes a wide variety of analytical, computational, and numerical methods. The conference aimed to foster cooperation between students and researchers in the areas of computational mathematics and engineering sciences, and provide a platform for

them to share significant research ideas. This book is a valuable resource for graduate students, researchers and educators interested in the mathematical tools and techniques required for solving various problems arising in science and engineering, and understanding new methods and uses of mathematical analysis.

Annotation New edition of a reference that presents the values of properties typical for the most common alloy processing conditions, thus providing a starting point in

the search for a suitable material that will allow, with proper use, all the necessary design limitations to be met (strength, toughness, corrosion resistance and electronic properties, etc.) The data is arranged alphabetically and contains information on the manufacturer, the properties of the alloy, and in some cases its use. The volume includes 32 tables that present such information as densities, chemical elements and symbols, physical constants, conversion factors, specification requirements, and compositions of various alloys and metals. Also contains a section on manufacturer listings with contact information. Edited by Frick, a professional engineering consultant. Annotation c. Book News, Inc., Portland, OR (booknews.com).

This new title provides information on the relationships of such biological materials as yeasts, fungi, and plasmids with metals they come in contact with. Readers will find in-depth discussions by noted experts in their respective fields on the toxicity of heavy metals, accumulation and precipitation of sulphides, and the reactions of bacterial cell walls to the presence of metal ions. This volume is ideal for undergraduates and graduates, as well as researchers unfamiliar with metal-microbe interactions who are seeking a useful introduction to the field.

Disseminating knowledge of the state language to the non-Magyar half of the citizenry was deemed a priority within the Dualist Hungarian state's cultural policies. Drawing on a wide array of sources, this book provides an in-depth look at how Hungarian was taught to ethnic Romanian and German children in the eastern tracts of the kingdom between the 1870s and the First World War. It covers the

ever-harshening legislation from the period, reconsidering the role of state supervision and exploring the contemporary methodological debates as well as taking a closer look at classroom practices. Book jacket.

Out on the Prairie

Assuming 'God' as in 'God will provide' is the biggest excuse used in the last two thousand years or more, Anthony Ramekin sets about using his extensive contacts in the art-world, which he has been part of for more than twenty five years, to facilitate the rise and rise of a brilliant young photographer, Dorian Grey, his lover . Soon he realizes that the knowledge he is passing on, comes in equal measurements to the wisdom, love and fast mind of someone so much younger than himself. As Oscar Wilde so famously said: 'I'm not young enough to know everything' Scandal, sets off a useful precedent for the people's interest in imagery, which somehow strikes a chord deep in their hearts. This is, after all, a love story, set in some of the world's great cities and Grand Hotels. The 'Hotel de l'Europe' in Amsterdam, the 'Cloitre de St.Louis' in Avignon, the 'Grand Hotel

Wagner' in Palermo, The 'Hotel des Bains' in Venice. Berlin, London, Cordoba in Southern Spain, Monreale in Sicily and Bangkok all pass by. 'Recognizing fresh talent is not an act of abuse, ' Anthony is heard to say at some press-conference, beleaguered by tabloid scribblers, 'but can be gentle and enrich everybody's life.' Soon Dorian is working on his second book of photographs, cataloguing first love between two under-aged boys, with two of Luchino Visconti's most famous films, 'The Leopard' and 'Death in Venice' as background. Again Anthony is facilitating this new love-affair, which takes on an integral part of the story. Soon they realize they have a worldwide best-seller on their hands.

Brockelmann's History of the Arabic Written Tradition offers bio-bibliographic information about works written in Arabic and their authors, with an emphasis on manuscripts from the classical period. This originally multivolume reference work is divided in chronologically organized sections, which are subdivided by literary genre. Individual entries typically consist of a biographical section and a list of the author's works in manuscript and print, with references to secondary literature. The "Brockelmann", now also available in English, is an indispensable research tool for anyone working on the Islamic world in general and the Middle East in particular.

The Politics of Early Language Teaching

L'opera focalizza l'attenzione sul panorama delle più importanti formulazioni che maggiormente sono impiegate nella progettazione degli elementi in carpenteria metallica e nel progetto delle relative connessioni. In particolare, si pongono all'attenzione alcune personali osservazioni in merito ai risultati di alcune formulazioni proposte dalla norma europea (da cui le NTC attingono e in alcuni punti addirittura rimandano), evidenziandone i lati positivi e negativi, sia dal punto

di vista della mera schematizzazione matematica adottata sia in correlazione ai risultati sperimentali disponibili al momento in letteratura. Ormai è indubbio che le NTC verranno in un prossimo futuro completamente sovrascritte dagli Eurocodici, ed è proprio questa convinzione che mi spinge a ritenere di maggiore peso e considerazione l'intero corpo normativo degli Eurocodici: una vastissima norma che sempre di più ormai pressa alla sfida di un passaggio di consegne definitivo.

This almost entirely rewritten edition remains the only comprehensive, up-to-date account of the subject available today—with nearly half of all literature references made to work done since 1973. Theoretical treatment of micelle formation has been greatly improved, making it possible to predict (from first principles) the size and size distribution of micelles formed by many simple amphiphiles . . . as well as the critical concentration at which they first form. Defines four distinct modes of association between protein and detergents (or other amphiphiles), and gives a plausible explanation to show why some ionic detergents generally denature

proteins while nonionic detergents often do not. Also includes entirely new chapters on serum lipoproteins and on membrane proteins.

Classics in Total Synthesis II is the long awaited sequel to Classics in Total Synthesis, a book that has made its mark as a superb tool for educating students and practitioners alike in the art of organic synthesis since its introduction in 1996. In this highly welcomed new volume, K. C. Nicolaou and Scott A. Snyder discuss in detail the most impressive accomplishments in natural product total synthesis during the 1990s and the first years of the 21st century. While all of the features that made the first volume of Classics so popular and unique as a teaching tool have been maintained, in this new treatise the authors seek to present the latest techniques and advances in organic synthesis as they beautifully describe the works of some of the most renowned synthetic organic chemists of our time. · domino reactions, cascade sequences, biomimetic strategies, and asymmetric catalysis are systematically developed through the chosen synthesis · cutting edge synthetic technologies are discussed in terms of mechanism and scope · new reactions, such as olefin metathesis, are presented in mini-review style · abundant references are given for further reading Graduate students, educators, and researchers in the fields of synthetic and medicinal chemistry will wish to have a

copy of this book in their collection as an indispensable companion that both augments and supplements the original Classics in Total Synthesis. From reviews of "Classics in Total Synthesis": " a volume, (..) which any chemist with an interest in synthetic organic chemistry will wish to acquire." JACS "this superb book (..) will be an essential purchase for many organic chemists." Nature
