Designated a Doody's Core Title! What constitutes "informed consent"? What can I do if the patient lacks the capacity to make decisions? How should I respond to a patient who requests my help in dying? What is the rationale for giving a patient medication (chemical restraints) against his or her will? What exactly are "patient's rights" and how does one advocate for one's patients? Applied Ethics in Nursing provides an easily understandable guide to the kind of ethical dilemmas you face in practice. Law, Ethics and Professional Issues for Nursing

Polemic Paper from the year 2018 in the subject Medicine - Medical Frontiers and Special Areas, grade: 1, Egerton University, language: English, abstract: This paper will provide a critical analysis of palliative seduction, especially with regard to ethical decision making in physician-assisted suicide. It is evident that nurses play pivotal roles in the implementation of palliative seduction. Arevalo et al (2013) state "that nurses are important participants in the different phases of implementation of palliative sedation; starting with the day-to-day care of terminally ill patients and their relatives" (p. 618). Palliative seduction has become one of the most contentious ethical issues in the United States of America. Consequently, ethical decision making has also become one of the most challenging issues to baccalaureate prepared nurses and society at large. Nurses experience immense challenges while caring for patients in palliative care, especially in making end-of-life decisions. Fernandes and Moreira (2012) reaffirm the challenges faced by nurses in ethical decision making by stating that nurses "consider that end-of-life decisions, privacy, interaction between nurse/patient and/or family, team work, and access to care arise in their daily life" (p. 81). This is, probably the principal reason as to why current debate over whether palliative seduction in physician-assisted suicide should be legalized or not has evoked unprecedented controversy in the society. From a critical approach, the issue of palliative seduction has been complicated by the doctrine of double effect. However, this doctrine does not have legal, empirical and ethical relevance.

Concepts and Cases in Nursing Ethics, second edition

Nursing Ethics

The papers in this section on the legal aspects of nursing can be divided into two parts: (a) the rights and responsibilities of nurses, patients, and the medical system and (b) treatment, with its legal ramifications. How does one decide whether patients' rights or the health professional's rights are to be considered more seriously? Is there an absolute "right" or "wrong"? Since legal rights are sanctioned by constantly changing social and political climates, this may, in effect, diminish the possibility of anything absolute. The question of the "equivalency" of legal and moral rights is also addressed. Due to the prevalent vagueness with regard to bioethical issues as they affect human and legal rights, often we become absorbed in philosophical polemics without being able to arrive at anyone answer.

In order to move beyond the ethical/theoretical formulations, there is daily confrontation in the nursing profession -the practical application of theoretics.

Ethical Decision Making in Nursing

The book looks at a broad perspective of decision making and each chapter focuses on a specific aspect related to making crucial decisions. Following an initial introduction the book explores the concept of autonomy and the many factors that influence autonomous practise. The role of knowledge in decision making, using evidence to inform decisions, as well as different approaches to decision making are also examined - including the traditional or rational approach, decision analysis and the development of professional judgement. Dilemmas arise when decisions are made and therefore ethical decision making is an important component of this book. Management decisions may be different from those related to giving specific care to women, hence one chapter focuses on making management decisions. Emphasis is also placed on the role of the midwife in helping women make their own decisions, the role of reflection in enhancing the decisions midwives make and the support midwives can receive from their Supervisor of Midwives. Flowcharts explain and facilitate the decision-making process. A very practical approach to decision-making in midwifery, with contributions from midwives who have considerable experience in this area Provides guidelines on how to achieve successful autonomous midwifery practice, enabling theory to be effectively applied to practice Includes coverage of management roles and decision-making as well as clinical scenarios, offering frameworks and flowcharts to guide the inexperienced Suggests different approaches to making difficult decisions

Understanding Ethics for Nursing Students

Short case studies, based on real stories from the health care arena, ensure that each chapter of this book is rooted in descriptions of nursing practise that are grounded, salient narratives of nursing care. The reader is assisted to explore the ethical dimension of nursing practice: what it is and how it can be portrayed, discussed, and analysed within a variety of practice and theoretical contexts. One of the unique contributions of this book is to consider nursing not only in the

context of the individual nurse – patient relationship but also as a social good that is of necessity limited, due to the ultimate limits on the nursing and health care resource. This book will help the reader consider what good nursing looks like, both within the context of limitations on resources and under conditions of scarcity. Indeed, any discussion of ethical issues in nursing should be well grounded in a conceptualisation of nursing that nursing students and practising nursing can recognise, accept and engage with. Nursing, like medicine, social work and teaching has a clear moral aim – to do good. In the case of nursing to do good for the patient. However it is vital that in the pressurised, constrained health service of the 21st century, we help nurses explore what this might mean for nursing practice and what can reasonably be expected of the individual nurse in terms of good nursing care.

Nursing Law and Ethics

This book follows two lines of inquiry in understanding nursing ethics in the historical-cultural context of modern China. Firstly, it scrutinizes the prescribed set of moral virtues for nurses in fulfilling their role requirements during different periods of nursing development over the past century. Based on empirical studies, the book, secondly, explores the nurses' evaluations of their ethical responsibilities in current practice. It carefully examines the particular viewpoints of nurses in their ethical appraisal of nursing practice and patient care situations. Drawing upon traditional ethical outlooks, international norms, and the experiences of nurses as they face difficult care situations, this book concludes with recommendations for improving the quality of nursing in contemporary China.

Ethics for Nursing

This unique text uses hands-on examples and learning exercises to help you apply critical ethical principles to specific nursing challenges while addressing a range of patient populations and settings.

Ethical Decision Making in Nursing and Healthcare

This volume brings together researchers from different European countries and disciplines who are involved in Clinical Ethics Consultation (CEC). The work provides an analysis of the theories and methods underlying CEC as well a discussion of practical issues regarding the implementation and evaluation of CEC. The first section deals with different possible approaches in CEC. The authors explore the question of how we should decide complex cases in clinical ethics, that is, which ethical theory, approach or method is most suitable in order to make an informed ethical decision. It also discusses whether clinical ethicists should be ethicists by education or rather well-trained facilitators with some ethical knowledge. The second chapter of this book focuses on practical aspects of the implementation of CEC structures. The analysis of experienced clinical ethicists refers to macro and micro levels in both developed and transitional countries. Research on the evaluation of CEC is at the centre of the final chapter of this volume. In this context conceptual as well as empirical challenges with respect to a sound approach to judgements about the quality of the work of CECs are described

and suggestion for further research in this area are made. In summary this volumes brings together theorists and healthcare practitioners with expertise in CEC. In this respect the volume serves as good example for a multi- and interdisciplinary approach to clinical ethics which combines philosophical reasoning and empirical research.
