World Biography

This new Science of Nutrition text examines nutrients, their cellular functions, their metabolism in the human body, and the basis of their requirements. It focuses on the use of nutrients and how they metabolize across the molecular, cellular,

tissue, organ, and whole-body levels. Integrated nutrient utilisation and metabolism across the molecular, cellular, tissue, and whole body levels Details the basic biochemistry and physiology underlying human nutrition and offers in-depth coverage of carbohydrates, lipids, protein/amino acids, and more Examines specialised topics such as fuels needed during exercise, nutrition and cardiovascular disease, and dietary recommendations Highlights significant information with more than 350 clearly designed illustrations and tables Organises coverage into seven units that reflect the traditional nutrient class divisions while also integrating discussions of nutrients and nutrient functions that transcend these classifications Relates basic science to everyday nutrition with nutrition insights and life cycle considerations throughout the text Illustrates the effects of abnormalities in normal metabolism and nutrition problems in Clinical Correlation boxes Encourages readers to apply scientific knowledge to real life situations with Thinking Critically sections Provides coverage of food sources and current recommended daily intakes Makes reading and study easier with chapter outlines, key abbreviations, cross-referencing, references, and recommended readings (Includes FREE online biannual nutrition newsletter)
