The Future of Nursing

A New York city neighborhood once called “the beginning of the end of civilization” is where Michael Gecan starts. Hired by residents to help them save their community, he and local leaders spend more than a decade wrestling New York politicians in an impassioned effort against all odds that brings in five thousand new homes. From bad behavior by Ed Koch to complicated negotiations with Rudy Giuliani, Gecan tells the inside story of how the city really works, and how any organized group of citizens can wield power in seemingly unmovable bureaucracies. Gecan’s unwavering vision of the value of public action has roots in a rough childhood in Chicago, where he witnessed extortion by the mob and a tragic fire in his Catholic grade school that left ninety-two children and three nuns dead. In his inspiring story of the will to claim the full benefits of citizenship, Gecan offers unforgettable lessons that every American should know: What is the best way to talk to politicians? What resources do all communities need to create change? What kinds of public actions really work?

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's

increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
