Figliola and Beasley's 6th edition of Theory and Design for Mechanical Measurements provides a time-tested and respected approach to the theory of engineering measurements. An emphasis on the role of statistics and uncertainty analysis in the measuring process makes this text unique. While the measurements discipline is very broad, careful selection of topical coverage, establishes the physical principles and practical techniques for quantifying many engineering variables that have multiple engineering applications. In the sixth

edition, Theory and Design for Mechanical Measurements continues to emphasize the conceptual design framework for selecting and specifying equipment, test procedures and interpreting test results. Coverage of topics, applications and devices has been updated—including information on data acquisition hardware and communication protocols, infrared imaging, and microphones. New examples that illustrate either case studies or interesting vignettes related to the application of measurements in current practice are introduced.

Trucks of New Zealand

New York, late 1840s, and in the wild, noisy, brash and beautiful circus of Silas P. Swift a shadowy, mesmeric woman entrances crowds because she can unlock the secrets of troubled minds. Above them all her daughter sweeps and soars: acrobat and tightrope-walker. People cannot take their eyes from the mysterious woman in the Big Top who can help so many others - but she cannot unlock dark, literally unspeakable, memories of her own. In London memories fester in the mind of an old and venomous duke of the realm. He plots, with an unscrupulous lawyer (and a huge financial reward) against the mother and the daughter: to kill one, and to abduct the other and bring her across the Atlantic to him: She is mine. The actress and mesmerist Cordelia Preston and her daughter Gwenlliam live with their unusual family in the exciting new city among exciting new ideas: the telegraph, the daguerrotype, anaesthesia, table-tapping. And among the dangerous street-gangs of New York also, whose raw violence meets Cordelia and Gwenlliam and those that they love, with unexpected results.

The Blitz was one of the gravest threats the UK has faced in its long history. From August 1940 to May 1941, the island nation was subjected to a relentless campaign of aerial bombing. German night raids gutted towns and cities, rendering thousands homeless (250,000 Londoners were homeless by October 1940 alone), killing 43,500 civilians and wounding 139,000 more. That the Blitz did not bring the UK to its knees is due, in large part, to a vast response by Civil Defence services and the British people themselves. Preparations for enduring a strategic bombing campaign began in the mid-1930s with the development of the Air Raid Precautions (ARP) organisation, and by late 1938 more than 700,000 people were serving in ARP roles. During the war itself, some 1.5 million people took up duties in the Civil Defence (General) services, in roles ranging from air raid wardens to ambulance drivers to heavy rescue parties.

Seeing the Future

Polymers are an example of “products-by-process”, where the final product properties are mostly determined during manufacture, in the reactor. An understanding of processes occurring in the polymerization reactor is therefore crucial to achieving efficient, consistent, safe and environmentally friendly production of polymeric materials. Polymer Reaction Engineering provides the link between the fundamentals of polymerization kinetics and polymer microstructure achieved in the reactor. Organized according to the type of polymerization, each chapter starts with a description of the main polymers produced by the particular method, their key microstructural features and their applications. Polymerization kinetics and its effect on reactor configuration, mass and energy balances and scale-up are covered in detail. The text is illustrated with examples emphasizing general concepts, principles and methodology. Written as an authoritative guide for chemists and chemical engineers in industry and academe, Polymer Reaction Engineering will also be a key reference source for advanced courses in polymer chemistry and technology.

Proceedings of SAE-China Congress 2016: Selected Papers

A psychological thriller in the tradition of Patricia Highsmith about two couples caught in a web of conflicting passions while deep-sea diving off the beautiful Canary Islands. In the late 1990s, Sven Fiedler and his girlfriend, Antje, left Germany for the island of Lanzarote, rejecting what Sven considered a vulgar culture of materialism and judgment. The young couple set up a diving service catering to tourists eager to bask in the warm sunshine and explore the silent, gleaming marine paradise that makes this otherwise barren volcanic island such a remarkable retreat. Sven's approach was simple: take the mechanics of diving seriously, instruct his clients clearly, and stay out of their personal business as best he can. And life on the island goes smoothly until two German tourists--Jola von der Pahlen, a daytime soap star on the verge of cinematic success, and Theo Hast, a stalled novelist--engage Sven for a high-priced, intensive two-week diving experience. Staying in a guest house on Sven and Antje's property, the two visitors and their hosts quickly become embroiled in a tangle of jealousy and suspicion. Sven is struck by Jola's beauty, her evident wealth, and her apparently volatile relationship with the much older Theo. Theo quickly leaps to the conclusion that Sven and Jola are having an affair, but, oddly, he seems to facilitate it rather than trying to intervene. Antje, looking on, grows increasingly wary of these particular clients. As the point of view shifts from one character to the next, the reader is constantly kept guessing about who knows what, and, more important, who is telling the truth. A brutal game of delusion, temptation, and manipulation plays out, pointing toward a violent end. But a quiet one, down in the underwater world beneath the waves.
