## **Pediatric Dosage Handbook**

Approximately every two minutes a baby dies in the WHO Western Pacific Region. The majority of newborn deaths occur within the first few days, mostly from preventable causes. This Guide provides health professionals with a user-friendly, evidence-based protocol to essential newborn care--focusing on the first hours and days of life. The target users are skilled birth attendants including midwives, nurses and doctors, as well as others involved in caring for newborns. This pocket book provides a step-by-step guide to a core package of essential newborn care interventions that can be administered in all health-care settings. It also includes stabilization and referral of sick and preterm newborn infants. Intensive care of newborns is outside the scope of this pocket guide. This clinical practice guide is organized chronologically. It guides health workers through the standard precautions for essential newborn care practices, beginning at the intrapartum period with the process of preparing the delivery area, and emphasizing care practices in the first hours and days of a newborn's life. Each section has a color tab for easy reference.

## **Swaiman's Pediatric Neurology - E-Book**

This new clinical resource brings you a state-of-the-art comprehensive review on every clinical condition encountered in pediatric nephrology in one concise, clinically focused text. International experts provide you with the latest on epidemiology, diagnosis, investigations, management, and prognosis for a full range of pediatric kidney disorders. A full-color, highly visual, meticulously crafted format, makes this material remarkably easy for you to access and apply. Comprehensive Pediatric Nephrology also serves as an ideal resource for board review study for the ABP subspecialty boards in pediatric nephrology. Just the right

amount of "need-to-know" basic science coupled with practical clinical guidance for every disorder helps you make efficient, informed decisions. The book provides a much needed update on the genetic origins of pediatric kidney disorders. Chapters about glomerulonephritis, nephrotic syndrome, and tubular disorders provide an orientation in the pathophysiology, differential diagnosis, and treatment of these heterogeneous disease entities. Disease specific chapters include diagnostic work-up, laboratory evaluation, and management of disorders and complications, making this necessary information readily accessible. The prevention and management of pediatric chronic renal failure and its complications are comprehensively covered in many detailed chapters. Four chapters devoted to childhood hypertension offer you insights into an increasingly prevalent condition among pediatric patients so you can treat them more effectively. A chapter on the role of the interventional radiologist in pediatric nephrology keeps you apprised of the latest advances in a key area in the field. The function of complementary and alternative medicine in patients with renal disease is reviewed for the first time in a standard pediatric nephrology textbook. A consistent organization throughout and a full-color layout lets you find diagnostic guidance quickly.

## **BNF for Children 2008**

This edition of the Manual of Neonatal Care has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.

## **Saunders Nursing Drug Handbook 2002**

Neonatal sepsis still remains a significant cause of morbidity and mortality in the newborn, particularly in preterm, low birth weight infants. Despite advances in neonatal care, overall case-fatality rates from sepsis may be as high as 50%. Clinical signs of bacterial infection are vague and non-specific, and up to now there exists no easily available, reliable marker of infection despite a large bulk of studies focussing on inflammatory indices in neonatology. Every neonatologist is faced with the uncertainty of under- or over- diagnosing bacterial infection. In this book three topics will be discussed: clinical presentation including a general approach to sepsis neonatorum and two distinct diagnoses pneumonia and osteomyelitis diagnostic approaches including C-reactive protein and the immature myeloid information, and prevention and treatment of bacterial infection with immunoglobulins.

Critical Findings boxes outline symptoms and diagnostic findings that require immediate attention, helping you prioritize assessment data and steps in initial care. Coverage in clinical chapters includes pathophysiology and etiology, prevention, data collection, treatment, complications, outcomes, prognosis, and parent education. Expanded Neonatal Surgery chapter covers all of the most common procedures in neonatal surgery. Follow-up of the Neonatal Intensive Care Unit Infant chapter is expanded to include coverage of outcomes management and discharge planning. Streamlined references are updated to include only the most current or classic sources.

### **The Harriet Lane Handbook E-Book**

Monitoring the safety of medicine use in children is of paramount importance since, during the clinical development of medicines, only limited data on this

aspect are generated through clinical trials. Use of medicines outside the specifications described in the license (e.g. in terms of formulation, indications, contraindications or age) constitutes off-label and off-license use and these are a major area of concern. These guidelines are intended to improve awareness of medicine safety issues among everyone who has an interest in the safety of medicines in children and to provide guidance on effective systems for monitoring medicine safety in the pediatric populations. This book will be of interest to all health care professionals, medicine regulatory authorities, pharmacovigilance centers, academia, the pharmaceutical industry and policy-makers. Systems for monitoring medicine safety are described in Annex 1. Pharmacovigilance methods and some examples of recent information on adverse reactions to marketed medicines are discussed in Annex 2.--Publisher's description.

## **Pediatric Primary Care - E-Book**

This book is a leading source of paediatric drug information. Compiled with the advice of clinical experts, this book provides essential information for all healthcare professionals involved in the prescribing, dispensing, monitoring & administration of medicines to children. It encourages the safe, effective and appropriate use of medicines in the management of childhood conditions. Updated in print every twelve months, the BNFC reflects current best practice, as well as legal and professional guidelines relating to the use of medicines. The BNF is also available online as part of Medicines Complete, on PDA and on also CD-ROM for intranets. 70 per cent of healthcare professionals have become more aware of suitable medicines & treatments as a result of using BNFC. Whereas the 'standard' BNF deals with the use of medicines for individuals of all ages, BNFC is able to focus specifically on the use of medicines in children. This is important because children respond to ill health and drug treatment in a different way to adults. BNFC deals with the drug management of childhood conditions more extensively. Infantile spasms, acute asthma, pulmonary hypertension, congenital metabolic disorders, and paediatric emergencies are just a few examples of this. BNFC covers the drug treatment of rare childhood diseases such as type 2 diabetes whose incidence is increasing. BNFC provides more information on unlicensed use of medicines ranging from fluoxetine for childhood depression to levamisole for nephrotic syndrome. BNFC includes more guidance on specialist paediatric interventions, ranging from caffeine for neonatal apnoea to intravenous ibuprofen for closure of ductus arteriosus. BNFC includes details of those medicines that are used in children in a different way to adults. While nitrazepam may be used for infantile spasms in children, it is used as a hypnotic in adults. Administering medicines to children is a challenge in itself and so BNFC provides more practical advice on this. BNFC provides more space for clearer and more comprehensive presentation of paediatric doses including neonatal doses and makes special reference to the cautions, contra-indications, side-effects, and drug interactions of medicines used in children. BNFC includes algorithms for acute paediatric life support and nomograms for calculating body surface area. BNFC includes details of unlicensed medicines that can be imported, manufactured by 'special-order', or prepared extemporaneously. BNFC provides information on the drug management of conditions that are relevant to children. Parkinson's disease and dementia, for example, are dealt with by the BNF.

UPDATED! Content reflects the latest developments in the field meeting the needs of AD programs and BS Respiratory Care programs which are growing in this field. NBRC exam-style assessment questions test your comprehension of the material in each chapter. Neonatal and pediatric disorders case studies provide an opportunity to see how content covered in the text applies to the more difficult areas of care for neonatal and pediatric disorders. Comprehensive test preparation is provided through coverage of all the content in the matrix for the NPS exam. Learning objectives at the beginning of each chapter highlight what you should learn by breaking down key content into measurable behaviors, criteria, and conditions. Academic and authoritative presentation of content covers all of the major topics of respiratory care for neonates, infants, and children, including both theory and application. Dedicated Quality and Safety chapter addresses quality care for the neonatal/pediatric patient. NEW! Revised chapter Invasive Mechanical Ventilation of the Neonate and Pediatric Patient, conforms to the new terminology and taxonomy for modes of ventilation. NEW! Additional case studies provides more application opportunities for you. NEW! Revised content better correlates to the NBRC NPS exam.

## **The Harriet Lane Handbook**

The need for safe and effective use of medicines in children and WHO's initiative "Make Medicines Child Size" have boosted research and educational activities in the area of pediatric clinical drug research. This issue focuses on both general and specific aspects of neonatal and pediatric clinical pharmacology including ethics, pharmacogenomics, metabolomics, adverse drug reactions, pain medication, pulmonary hypertension and several other hot topics. The editors have been able to find outstanding authors for the different parts on neonatal and pediatric pharmacology.

## **Pediatric Infectious Diseases E-Book**

A concise and practical guide to caring for children with life-limiting conditions, Paediatric Palliative Care covers the common symptoms and challenging issues healthcare professionals are likely to encounter, and includes a detailed drug formulary for quick reference.

## **Pediatric Dosage Handbook and Formulary**

The pediatric population is a dynamic group, with major changes in pharmacokinetics and pharmacodynamics occurring throughout infancy and childhood. This resource contains all the content from the Pediatric & Neonatal Dosage Handbook, and includes an International Trade Names Index including drug trade names from over 100 countries.
