The New York Times bestselling authors of *Switch* and *Made to Stick* explore why certain brief experiences can jolt us and elevate us and change us—and how we can learn to create such extraordinary moments in our life and work. While human lives are endlessly variable, our most memorable positive moments are dominated by four elements: elevation, insight, pride, and connection. If we embrace these elements, we can conjure more moments that matter. What if a teacher could design a lesson that he knew his students would remember twenty years later? What if a manager knew how to create an experience that would delight customers? What if you had a better sense of how to create memories that matter for your children? This book delves into some fascinating mysteries of experience: Why we tend to remember the best or worst moment of an experience, as well as the last moment, and forget the rest. Why “we feel most comfortable when things are certain, but we feel most alive when they're not.” And why our most cherished memories are clustered into a brief period during our youth. Readers discover how brief experiences can change lives, such as the experiment in which two strangers meet in a room, and forty-five minutes later, they leave as best friends. (What happens in that time?) Or the tale of the world's youngest female billionaire, who credits her resilience to something her father asked the family at the dinner table. (What was that simple question?) Many of the defining moments in our lives are the result of accident or luck—but why would we leave our most meaningful, memorable moments to chance when we can create them? *The Power of Moments* shows us how to be the author of richer experiences.

“Gripping, page-turning material . . . a new way of thinking about survival in a world filled with hazards and distractions.”
—Charles Duhigg, author of Smarter Faster Better and The Power of Habit A safety expert reveals why few of us are as careful as we think we are, and what we can do about it. The modern world can be a dangerous place, filled with fast cars, smartphones, new drugs, and thrill sports. Meanwhile, we humans are as fragile as ever. In fact, after a century of steady improvement, injuries and accidental deaths are on the rise. Steve Casner has devoted his career to studying the psychology of safety, and he knows there’s not a safety warning we won’t ignore or a foolproof device we can’t turn into an implement of disaster. Careful helps us understand why we do things like insist on the fat-free salad dressing but then text and drive. Casner explains the psychological traps that can lead us to the scene of an accident. They’re the same whether you’re a pilot, a Hollywood stuntwoman, a parent, or the owner of a clogged dishwasher you’re trying to fix with a screwdriver. Then Casner shows us how and when the injuries happen, so we know exactly what we should really be worrying about. Casner’s book helps us keep our fingers attached in the kitchen, our kids afloat at the pool, and our teens safe behind the wheel, and shows us many other ways we can take control of our own safety and get through the day in one piece.
