The GX series adds new meaning to the truth that experienced organists have known for years - Technics delivers incomparable sound and playability. PCM digital sound has long been a trademark of Technics organs. In the GX series PCM realism becomes even more strikingly natural and forms the basis of each and every organ sound. Plentiful preset sounds now generate expressive timbral nuances and dynamics. Environmental sounds are included for the first time, allowing the creation of a natural background aura replete with PCM recordings of birdsong, waves, and more. The latest enhancement of famous Technics playability is the "Musical Director," a high-tech liquid crystal display that changes screens to match your information requests. Note too the panel layout. Timbres for the upper and lower manuals are arranged for intuitive differentiation and positive access. In every aspect of its design, the GX series assures the unbounded performance and sound quality sought by the discriminating musician. Leading scholars historicize and theorize technology's role in architectural design. Although the question of technics pervades the contemporary discipline of architecture, there are few critical analyses on the

topic. Design Technics fills this gap, arguing that the technical dimension of design has often been flattened into the broader celebratory rhetoric of innovation. Bringing together leading scholars in architectural and design history, the volume's contributors situate these tools on a broader epistemological and chronological canvas. The essays here construct histories—some panoramic and others unfolding around a specific episode—of seven techniques regularly used by the designer in the architectural studio today: rendering, modeling, scanning, equipping, specifying, positioning, and repeating. Starting with observations about the epistemological changes that have unfolded in the discipline in recent decades but seeking to offer a more expansive meaning for technics, the volume casts new light on concepts such as form, experience, and image that have played central roles in historical architectural discourses. Among the questions addressed: How was the concept of form immanent in practices of scanning since the late nineteenth century? What was the historical relationship between rendering and experience in Enlightenment discourses? How did practices of specifying reconfigure the distinction between intellectual and manual labor? What kind of rationality is inherent in the designer's constant clicking of the mouse in front of her screen? In addressing these and other questions, this engaging and timely collection thereby proposes technics as a site for historical and philosophical reflection not only for those engaged in architectural design but also for any scholar working in the humanities today. Contributors: Lucia Allais, Edward Eigen, Orit Halpern, John Harwood, Matthew

C. Hunter, and Michael Osman.

What can homespun cloth, stuffed birds, quince jelly, and ginseng reveal about the formation of early American national identity? In this wide-ranging and bold new interpretation of American history and its Founding Fathers, Kariann Akemi Yokota shows that political independence from Britain fueled anxieties among the Americans about their cultural inferiority and continuing dependence on the mother country. Caught between their desire to emulate the mother country and an awareness that they lived an ocean away on the periphery of the known world, they went to great lengths to convince themselves and others of their refinement. Taking a transnational approach to American history, Yokota examines a wealth of evidence from geography, the decorative arts, intellectual history, science, and technology to underscore that the process of "unbecoming British" was not an easy one. Indeed, the new nation struggled to define itself economically, politically, and culturally in what could be called America's postcolonial period. Out of this confusion of hope and exploitation, insecurity and vision, a uniquely American identity emerged.
