The old Internet typically connected personal computers. But a radically new Internet is emerging. Some call it an "Internet of Things" (IoT) or "Internet of Everything" (IoE). The IoT won't just connect people: it'll connect "smart" homes, appliances, cars, aircraft (a.k.a. drones)... offices, factories, cities... the world. By some estimates, the IoE will explode into a \$19 trillion market in just a few years. If that happens... when that happens... it will transform your life. ¿ You need to know what's coming. But, until now, most guides to the Internet of Everything have been written for technical experts. Now, the world's #1 author of beginning technology books has written the perfect introduction for every consumer and citizen. In *The Internet of Things*, Michael Miller reveals how a new generation of autonomously connected smart devices is emerging, and how it will enable people and devices to do more things, more intelligently, and more rapidly. ¿ Miller demystifies every type of smart device, both current and future. Each chapter ends with a special "and You" section, offering up-to-the-minute

advice for using today's IoT technologies or preparing for tomorrow's. You'll also discover the potential downsides and risks associated with intelligent, automatic interaction. When all your devices can communicate with each other (and with the companies that sell and monitor them), how private is your private life? Do the benefits outweigh the risks? And what does a connected world do when the connections suddenly go down? Packed with scenarios and insider interviews, The Internet of Things makes our future utterly, vividly real.

When it comes to large-scale public housing in the United States, the consensus for the past decades has been to let the wrecking balls fly. The demolition of infamous projects, such as Pruitt-Igoe in St. Louis and the towers of Cabrini-Green in Chicago, represents to most Americans the fate of all public housing. Yet one notable exception to this national tragedy remains. The New York City Housing Authority, America's largest public housing manager, still maintains over 400,000 tenants in its vast and well-run high-rise projects. While by no means utopian, New York City's public housing remains an acceptable and affordable option. The story of New York's success where so many other housing authorities faltered has been ignored for too long. Public Housing That Worked shows how New York's administrators, beginning in the 1930s, developed a rigorous system of public housing management that weathered a variety of social and political challenges. A key element in the long-term viability of New York's public housing has been the constant search for better methods in fields such as tenant selection, policing, renovation, community affairs, and landscape design. Nicholas Dagen Bloom presents the achievements that contradict the common wisdom that public housing projects are inherently unmanageable. By focusing on what worked, rather than on the conventional history of failure and blame, Bloom provides useful models for addressing the current crisis in affordable urban housing. Public Housing That Worked is essential reading for practitioners and scholars in the areas of public policy, urban history, planning, criminal justice, affordable housing management, social work, and urban affairs.

## **The Unofficial Guide to Walt Disney World, 1999**

Motivated by potentially turning Flushing Meadows, literally a land of refuse, into his greatest public park, Robert

Moses—New York's "Master Builder"—brought the World's Fair to the Big Apple for 1964 and '65. Though considered a financial failure, the 1964-65 World's Fair was a Sixties flashpoint in areas from politics to pop culture, technology to urban planning, and civil rights to violent crime. In an epic narrative, the New York Times bestseller Tomorrow-Land shows the astonishing pivots taken by New York City, America, and the world during the Fair. It fetched Disney's empire from California and Michelangelo's La Pieta from Europe; and displayed flickers of innovation from Ford, GM, and NASA—from undersea and outerspace colonies to personal computers. It housed the controversial work of Warhol (until Governor Rockefeller had it removed); and lured Ken Kesey and the Merry Pranksters. Meanwhile, the Fair—and its house band, Guy Lombardo and his Royal Canadians—sat in the musical shadows of the Beatles and Bob Dylan, who changed rock-and-roll right there in Queens. And as Southern civil rights efforts turned deadly, and violent protests also occurred in and around the Fair, Harlem-based Malcolm X predicted a frightening future of inner-city racial conflict. World's Fairs have always been collisions of eras, cultures, nations, technologies, ideas, and art. But the trippy, turbulent, Technicolor, Disney, corporate, and often misguided 1964-65 Fair was truly exceptional.

Designing Disney sets into history and puts into context the extraordinary contributions of the late John Hench, who, at the age of 94, still came into his office at Imagineering each day. His principles of theme park design, character design, and use of color made him a legendary figure, not only for Disney fans but also for students and aficionados of architecture, engineering, and design. Designing Disney reveals the magic behind John's great discoveries and documents his groundbreaking in several key areas: "Design Philosophy" examines the values, attitudes, aesthetics, and logic that went into the original concepts for Disney theme parks. In "The Art of the Show" and "The Art of Color," Hench reveals the essence of what makes the parks work so well. And in "The Art of Character," he lets the reader in on the how and why of the Disney characters' inherent popularity—their timeless human traits, archetypal shape and gestures that suggest these qualities graphically, and their emotional resonance in our lives.

The Answer to Global Overload Contending with the 24/7 news cycle and an endless barrage of choices and information has stymied leadership and decision-making strategies among those at the top. But we all know, this is not a just a problem for the elite. The broad-based reaction to this chaotic, unmanageable assault has been to retrench, and to focus on immediate, controllable decisions. In the process, we lose sight of the horizon. More dangerous still, is the shift we've seen from value creation to wealth creation, where information technology 1.0 has enabled a transaction-based society in which the "deal" is more important than the value it drives or the relationships it is based on. On our current path, the odds of a better future are slim. What we need is a new value proposition. Beating the Global Odds is the answer to the dangers of too much of a good thing. There's no going back, but there is the opportunity to set things right. In this book, Paul A. Laudicina, Managing Partner and Chairman of the Board of global consulting firm A.T. Kearney, provides a fast-paced and engaging tour of how we got to this point and what we can do about it. Drawing on examples from everything from world history and current media to anecdotes from his vast network of CEOs and the world's most innovative thinkers, Laudicina helps bring our world of seemingly fuzzy and disconnected pixels into sharp focus. The result is a compelling case for change and call to action—not only for global leaders but also for everyone who struggles with the question of how we can inspire and seize a better future how we can beat the global odds.

Advertised as the "Billion-Dollar Fair," the 1964-1965 New York World's Fair transformed a sleepy park in the borough of Queens into a fantasy world enjoyed by more than 51 million visitors from around the world. While many countries and states exhibited at the fair, the most memorable pavilions were built by the giants of American industry. Their exhibits took guests backward and forward in time, all the while extolling how marvelous everyday life would be through the use of their products. Many of the techniques used in these shows set the standard for future fairs and theme parks, and the pavilions that housed them remain the most elaborate structures ever built for an American fair. The 1964-1965 New York World's Fair showcases the beauty of this international spectacular through rare color photographs, published here for the first time.

This is the second volume in a series of chronological histories prepared by the Marine Corps History and Museums Division to cover the entire span of Marine Corps involvement in the Vietnam War. This volume details the Marine activities during

1965, the year the war escalated and major American combat units were committed to the conflict. The narrative traces the landing of the nearly 5,000-man 9th Marine Expeditionary Brigade and its transformation into the III Marine Amphibious Force, which by the end of the year contained over 38,000 Marines. During this period, the Marines established three enclaves in South Vietnam's northernmost corps area, I Corps, and their mission expanded from defense of the Da Nang Airbase to a balanced strategy involving base defense, offensive operations, and pacification. This volume continues to treat the activities of Marine advisors to the South Vietnamese armed forces but in less detail than its predecessor volume, *U.S. Marines in Vietnam, 1954-1964; The Advisory and Combat Assistance Era*.

Originally published in 1997, this hitherto hard-to-find study examines the impact that construction of radar stations and command facilities had on the American landscape. With accompanying black and white photographs throughout, the author explores patterns, themes, and trends that created, influenced, and formed the backdrop to the Cold War defense radar program. This study provides an in-depth look at the radar systems, a state by state listing of the infrastructure that supported the systems, and an extensive bibliography. This historic content can be used to understand and evaluate properties associated with America's detection and command and control system.

A stunning look at the profound impact of the jet plane on the mid-century aesthetic, from Disneyland to Life magazine Vanessa R. Schwartz engagingly presents the jet plane's power to define a new age at a critical moment in the mid-20th century, arguing that the craft's speed and smooth ride allowed people to imagine themselves living in the future. Exploring realms as diverse as airport architecture, theme park design, film, and photography, Schwartz argues that the jet created an aesthetic that circulated on the ground below. Visual and media culture, including Eero Saarinen's airports, David Bailey's photographs of the jet set, and Ernst Haas's experiments in color photojournalism glamorized the imagery of motion. Drawing on unprecedented access to the archives of The Walt Disney Studios, Schwartz also examines the period's

most successful example of fluid motion meeting media culture: Disneyland. The park's dedication to "people-moving" defined Walt Disney's vision, shaping the very identity of the place. The jet age aesthetic laid the groundwork for our contemporary media culture, in which motion is so fluid that we can surf the internet while going nowhere at all.

"This is a superb book. We are well-launched into a new generation of '60s scholarship, and The Free Speech Movement will be at the center of it. The analysis and personal recollection mix well, arguing persuasively for the never-to-be-underestimated place of contingency in history."—Todd Gitlin, author of *Media Unlimited* and *The Sixties: Years of Hope, Days of Rage* "This powerful book not only will be the classic work on the Free Speech Movement but also will be combed as a basis for hypotheses and new research on the movements of the '60s. It's absolutely thrilling, full of large implications for history, social movements, and character. The book contributed to my self-knowledge (personal, political, and professional) and will do the same for others. It combines humor and a firsthand, I-was-there flavor with provocative analyses. As a serious, original work of scholarship, this gives edited volumes back their good name."—Jesse Lemisch, Professor of History Emeritus, John Jay College of Criminal Justice of the City University of New York, and author of *The American Revolution Seen from the Bottom Up* "This book gets the Free Speech Movement and its significance exactly right—from the civil rights origins to refusing to idealize the moment at the expense of what came later. And no two better editors could be doing it."—Michael Rogin, author of *Ronald Reagan, The Movie, And Other Episodes in Political Demonology* "As a journalist, I was in Berkeley's Sproul Plaza to witness the mass arrests of the Free Speech Movement demonstrators in December 1964. As a citizen, I've always known that this was one of the pivotal moments in the great political and moral awakening of the 1960s. As a reader, I found much to feast on in this splendid and thoughtful collection of essays, about a movement whose effects and inspiration are with us still."—Adam Hochschild, author of *King Leopold's Ghost: A Story of Greed, Terror, and Heroism in Colonial Africa* "The Free Speech Movement was a pivotal moment in the evolution of student rights and university responsibilities. These splendid essays memorialize this period and offer competing perspectives on its meaning. Though differing widely in conclusions, collectively and individually they stand testament to the conviction that 'the price of freedom is eternal vigilance' and that 'the critical test of freedom of expression is the right of others to speak out on behalf of what we believe to be wrong.'"—Geoffrey R. Stone, author of *Eternally Vigilant: Freedom of Speech in the Modern Era* "This rich and entertaining set of essays offers remarkable insight into the genesis, development, and consequences of the Free Speech Movement. Written largely by participants and close observers, these essays offer both personal and analytical assessments of the roles of students, faculty, and administrators. Above all, the chapters on Mario Savio demonstrate his unusual capacity for leadership-charismatic without being dogmatic, committed to the cause while retaining a capacity to think and deal openly with dissent. This book should be read by anyone interested in understanding university and national politics in the '60s."—Chancellor Robert M. Berdahl, University of California, Berkeley

Disney's World's Fair For the 1964-65 New York World's Fair, the Disney company designed four pavilions, which later they reimagined for Disneyland. In this first volume of a definitive series, historian Andrew Kiste presents the story of the first of these pavilions: Great Moments with Mr. Lincoln. Two score and fifteen years ago, Walt Disney took an opportunity to bring his unique style of entertainment to the 1964-65 New York World's Fair in Flushing Meadow. Initially using the fair as an opportunity to determine the level of interest in his theme-park attractions with the "more sophisticated tastes" of those east of the Mississippi River, he quickly realized the opportunity that partnering with the fair would give him in raising funds for new technology to be used at Disneyland in California. After visiting Walt in California, Robert Moses, the president of the New York World's Fair Corporation, was fascinated with WED Enterprises' new audio-animatronic figure of Abraham Lincoln, demanding it be included in his fair. WED quickly established a relationship with the State of Illinois to develop an attraction for its World's Fair pavilion. However, the use of an animatronic Lincoln, only one hundred years after his death, was fraught with controversy, technological setbacks, and procrastination by the Illinois Commission on the New York World's Fair. Andrew Kiste examines the never-before-told story of the relationship between Walt Disney, WED Enterprises, and the State of Illinois, as together they developed "Great Moments with Mr. Lincoln" for the Illinois Pavilion at the New

York World's Fair of 1964-1965. Drawn extensively from archival documents discovered in the Illinois State Archives, as well as first-hand interviews with employees of the Illinois "Land of Lincoln" Pavilion at the Fair, Kiste brings the fascinating story of Disney's development of attractions for the Fair to life for the first time.

## **Birnbaum's Walt Disney World 2008**

After enduring 10 harrowing years of the Great Depression, visitors to the 1939-1940 New York World's Fair found welcome relief in the fair's optimistic presentation of the "World of Tomorrow." Pavilions from America's largest corporations and dozens of countries were spread across a 1,216-acre site, showcasing the latest industrial marvels and predictions for the future intermingled with cultural displays from around the world. Well known for its theme structures, the Trylon and Perisphere, the fair was an intriguing mixture of technology, science, architecture, showmanship, and politics. Proclaimed by many as the most memorable world's fair ever held, it predicted wonderful times were ahead for the world even as the clouds of war were gathering. Through vintage photographs, most never published before, The 1939-1940 New York World's Fair recaptures those days when the eyes of the world were on New York and on the future.

Jones Beach looms large in the hearts and lives of millions of New Yorkers. From its windswept beginnings on the far edge of an empire to its twentieth-century status as America's greatest public beachfront resort, it has been home to countless memories. In this evocative book, John Hanc explores the traditions, institutions, controversies, and characters of this beloved seaside resort, now a state historic landmark. He tells the stories of those who have shaped Jones Beach into a cultural icon—including public planning giant Robert Moses and beloved entertainer Guy Lombardo. The foreword is by "Mr. Long Island," former Newsday columnist Ed Lowe.

## **Searching the Skies**

The post-World War II science-based technological revolution inevitably found its way into almost all international expositions with displays on atomic energy, space exploration, transportation, communications, and computers. Major

advancements in Cold War science and technology helped to shape new visions of utopian futures, the stock-in-trade of world's fairs. From the 1940s to the 1980s, expositions in the United States and around the world, from Brussels to Osaka to Brisbane, mirrored Cold War culture in a variety of ways, and also played an active role in shaping it. This volume illustrates the cultural change and strain spurred by the Cold War, a disruptive period of scientific and technological progress that ignited growing concern over the impact of such progress on the environment and humanistic and spiritual values. Through the lens of world's fairs, contributors across disciplines offer an integrated exploration of the US-USSR rivalry from a global perspective and in the context of broader social and cultural phenomena—faith and religion, gender and family relations, urbanization and urban planning, fashion, modernization, and national identity—all of which were fundamentally reshaped by tensions and anxieties of the Atomic Age.

First demonstrated in 1928, color television remained little more than a novelty for decades as the industry struggled with the considerable technical, regulatory, commercial, and cultural complications posed by the medium. Only fully adopted by all three networks in the 1960s, color television was imagined as a new way of seeing that was distinct from both monochrome television and other forms of color media. It also inspired compelling popular, scientific, and industry conversations about the use and meaning of color and its effects on emotions, vision, and desire. In *Bright Signals* Susan Murray traces these wide-ranging debates within and beyond the television industry, positioning the story of color television, which was replete with false starts, failure, and ingenuity, as central to the broader history of twentieth-century visual culture. In so doing, she shows how color television disrupted and reframed the very idea of television while it simultaneously revealed the tensions about technology's relationship to consumerism, human sight, and the natural world.
